More July 05, 2019 Hannah Rated it Was Amazing Recommends It For: Teachers ELA K-8 Recommended to Hannah By: PD Session The book review was written after reading the book, not after the implementation of what was read. If I remember I might update this review in autumn/winter after I had a chance to try/test it.) This book is a fantastic resource for any ELA primary teacher. There is a short introduction at first that explains what guided reading is and why it's so important, but the bulk of the book dives into the details of the lesson components and the different materials that make up the lesson based on the student's reading level. Some information overlapped from season to season, but aside from a little boring it didn't bother me (the former when I first bought this book I had planned on kindergarten training, and was going to focus on the season before A&B and the reader emerged. In the middle of reading this book I got a call from my manager saying that I was moving to first grade, so I also read the early reader season once I realized that since the principles build on each other, I found a lot of frequent text, but clearly that text that I still felt was relevant because I gave the book 5/5 stars). There is an appendix on the back that contains copies of lesson plan formats and evaluation guides to use. There are also code to access the website containing videos, so you can see some of these practices performed in real time with real students. The last chapter of the book contains comprehensible strategies that can be used in the guided reading time lesson section. I am excited to implement this new research-based strategy as I believe it will really help students in my school grow and succeed. ... I'd be giving more stars if the book just structured lessons + understanding. The book loses all its stars for twisting decoding tutorials. Most word solving strategies encouraged by this book are littered. A lot of meaning, syntax and visual cue strategy training, does it match the image? A lot of meaning, syntax and visual cue strategy training, does it match the image? What will make sense and look right? - We need to know better than that now. Ian Richardson in particular should know better. What's more - pre-plan for teaching letters and sounds is not a systematic phonics - and it's far too little explicit training. Just a bad idea to find phonics training in guided reading and expect it enough for most students. please dont do this .
